

Biometric authentication is the verification of your identity by means of a physical trait, such as fingerprint or facial recognition. Enrolment of this functionality is voluntary.

By enrolling this functionality, you can use your fingerprint or other biometric identifier in the code app instead of your PIN-code. Your PIN-code can still be used in case the biometric authentication fails, and some services may require the use of PIN-code.

The biometric authentication is based on technology in your device. Nordea does not have access to or control over the biometric data stored on your device. Your device may support different types of biometric authentication, including fingerprint and facial recognition. Nordea may at any time block the use of biometric authentication on any or all devices.

Any biometric identifier stored in the device before enrolling the functionality will have access to use your code app. You are obligated to ensure that only your own fingerprint, facial data or other biometric data are stored on your device before enrolment. Please ensure that all other biometric identifiers are deleted before enrolling this functionality.

All actions made by using biometric authentication are binding to you as a customer.

If any biometric identifier is added to the device you must enrol again.

To disable using biometric authentication with this app, do any of the following:

- Deactivate the functionality in the app settings.
- Delete the app
- Call customer service

In addition to these terms and conditions, the following will be applied to the use of the biometric authentication in the code app:

- [General agreement terms governing services with access codes](#) and
- [Instructions on the secure use of access codes](#).
